Description / Inference of the Quantitative / Risk Measures

Sr. No.	Quantitative Measures/ Risk Measures	Brief description/ Inference of the Quantitative measure
1.	Total Expense Ratio	TER represents the expenses charged to the scheme for managing and operating the mutual fund, expressed as a percentage of the scheme's assets, subject to the applicable regulations.
2.	Sharpe Ratio	The Sharpe Ratio is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
3.	Beta Ratio	Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
4.	Standard Deviation of Returns	Standard deviation is a statistical measure of the range of an investment performance. Standard Deviation measures the extent to which the scheme's returns have historically varied from their average return.
5.	Portfolio Turnover Ratio	The Portfolio Turnover Ratio depicts how frequently securities in the portfolio are bought and sold over a particular period.
6.	Information Ratio	The information ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark, adjusted for the volatility or risk of those returns.

Description / Inference of the Quantitative / Risk Measures

Sr. No.	Quantitative Measures/ Risk Measures	Brief description/ Inference of the Quantitative measure
1.	Total Expense Ratio	TER represents the expenses charged to the scheme for managing and operating the mutual fund, expressed as a percentage of the scheme's assets, subject to the applicable regulations.
2.	Sharpe Ratio	The Sharpe Ratio is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
3.	Beta Ratio	Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
4.	Standard Deviation of Returns	Standard deviation is a statistical measure of the range of an investment performance. Standard Deviation measures the extent to which the scheme's returns have historically varied from their average return.
5.	Portfolio Turnover Ratio	The Portfolio Turnover Ratio depicts how frequently securities in the portfolio are bought and sold over a particular period.
6.	Information Ratio	The information ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark, adjusted for the volatility or risk of those returns.

Parag Parikh Dynamic Asset Allocation Fund

Type of Scheme: An open ended dynamic asset allocation fund investing in debt and equity instruments only

This Scheme is Suitable for Investors who can remain invested for minimum 3 years!

Product Labelling:
- Capital Appreciation & Income generation over medium to long term.
- Investment in equity and equity related instruments as well as debt and money market instruments while managing risk through active asset allocation

Investment Objective

The investment objective of the Scheme is to generate income/long-term capital appreciation by investing in equity, equity derivatives, fixed income instruments. The allocation between equity instruments and fixed income will be managed dynamically so as to provide investors with long term capital appreciation while managing downside risk.

However, there is no assurance that the investment objective of the Scheme will be achieved and the Scheme does not assure or guarantee any returns.

Description / Inference of the Quantitative / Risk Measures

Sr. No.	Quantitative Measures/ Risk Measures	Brief description/ Inference of the Quantitative measure
1.	Total Expense Ratio	TER represents the expenses charged to the scheme for managing and operating the mutual fund, expressed as a percentage of the scheme's assets, subject to the applicable regulations
2.	Sharpe Ratio	The Sharpe Ratio is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
3.	Beta Ratio	Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
4.	Standard Deviation of Returns	Standard deviation is a statistical measure of the range of an investment performance. Standard Deviation measures the extent to which the scheme's returns have historically varied from their average return.
5.	Modified Duration	Modified Duration helps indicate how sensitive the value of a debt portfolio may be to changes in interest rates.
6.	Macaulay Duration	Macaulay Duration is a measure of the average time it takes to receive a bond's cash flows.
7.	Portfolio Turnover Ratio	The Portfolio Turnover Ratio depicts how frequently securities in the portfolio are bought and sold over a particular period.
8.	Average Maturity	Average Maturity represents the weighted average maturity of the debt securities and other applicable instruments held in the portfolio.
9.	Yield to Maturity	Yield to Maturity, or YTM, is the annualized yield of the debt securities in the portfolio based on their prevailing market values and applicable assumptions.
10.	Information Ratio	The information ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark, adjusted for the volatility or risk of those returns.

Parag Parikh Arbitrage Fund

Type of Scheme: An open ended scheme investing in arbitrage opportunities. No investment in InvITs permitted.

Product Labelling:
- To generate income by investing in arbitrage opportunities
- Predominantly investing in arbitrage opportunities in the cash and derivatives segment of the equity market.

Investment Objective

The investment objective of the scheme is to generate capital appreciation and income by predominantly investing in arbitrage opportunities in the cash and derivatives segment of the equity market, and by investing the balance in debt and money market instruments.

However, there is no assurance that the investment objective of the Scheme will be achieved and the Scheme does not assure or guarantee any returns.

Description / Inference of the Quantitative / Risk Measures

Sr. No.	Quantitative Measures/ Risk Measures	Brief description/ Inference of the Quantitative measure
1.	Total Expense Ratio	TER represents the expenses charged to the scheme for managing and operating the mutual fund, expressed as a percentage of the scheme's assets, subject to the applicable regulations
2.	Modified Duration	Modified Duration helps indicate how sensitive the value of a debt portfolio may be to changes in interest rates.
3.	Macaulay Duration	Macaulay Duration is a measure of the average time it takes to receive a bond's cash flows.
4.	Average Maturity	Average Maturity represents the weighted average maturity of the debt securities and other applicable instruments held in the portfolio.
5.	Yield to Maturity	Yield to Maturity, or YTM, is the annualized yield of the debt securities in the portfolio based on their prevailing market values and applicable assumptions.

ABOUT PPFAS MUTUAL FUND

At PPFAS Mutual Fund, we believe successful investing is built on patience, discipline, and a long-term perspective. Our focus remains on keeping things simple - from our investment approach of our schemes, to the way we communicate.

Our mascot, Professor Tortoise (ProTo), symbolises wisdom, resilience, and the importance of staying focused on long-term goals rather than short-term market movements.

Inspired by the "Law of the Farm" philosophy, it reflects our belief that meaningful outcomes cannot be rushed -investments, much like nature, require time, patience, and discipline to grow.

HERE IS A SIMPLE WAY TO THINK ABOUT OUR SCHEMES

Parag Parikh Flexi Cap Fund

Long-term wealth creation potential with International exposure

Parag Parikh Large Cap Fund

Exposure to Nifty 100 TRI constituents, managed smartly, efficiently, and affordably

Parag Parikh ELSS Tax Saver Fund

Long-term equity exposure with tax saving u/s 80C of the Income Tax Act#

Parag Parikh Dynamic Asset Allocation Fund

Debt-oriented allocation with measured equity participation for tax efficiency^

Parag Parikh Conservative Hybrid Fund

Income potential with measured equity participation

Parag Parikh Liquid Fund

Short-term liquidity needs

Parag Parikh Arbitrage Fund

Short-term allocation through arbitrage opportunities

Subject to applicable conditions, under the old tax regime, as per Income Tax Rules prevailing for the Financial Year 2026-2027. For more information, visit https://amc.ppfas.com/schemes/Tax_Reckoner_2026-27.pdf?23042026_1 or https://www.incometaxindia.gov.in/income-tax-rule-2026

PPFAS MUTUAL FUND
There's only one right way©

Terminology	Explanation
AUM	AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.
Benchmark Index	A benchmark is often a market index, or a combination of indices that investors and portfolio managers use to measure an investment portfolio's performance. An index tracks the performance of a broad asset class, such as stocks of companies listed on stock exchanges, whose performance is used as a reference point / standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty 50, Sensex, BSE 200, BSE 500, Crisil 10Year Gilt Index.
Beta	Beta is a measure of an investment's volatility vis-à-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.
Exit Load	Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit load. For example, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit as redemption amount.
Fund Manager	An employee of the asset management company, who manages investments of the scheme. She/he is usually part of a larger team of fund managers and research analysts.
Holdings or Portfolio	The holdings or the portfolio is the set of underlying securities in which a mutual fund scheme's corpus is invested in. The objective is to give investors an idea of where their money has been invested by the fund manager.
Macaulay Duration	Macaulay Duration is a measure of the average time it takes to receive a bond's cash flows. It is calculated by summing up all the multiples of the present values of cash flows and corresponding time periods and then dividing the sum by the market bond price.
Minimum Investment	This is the minimum amount which a new investor in a mutual fund scheme is required invest while making lumpsum investment for the first time in the scheme.
Minimum SIP Amount	This is the minimum investment instalment amount which an investor is required to make for investing in a mutual fund scheme via Systematic Investment Plan (SIP).
Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
NAV	The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. These ratings are provided by Credit Rating Agencies (CRAs) in India and are based on the maturity of the underlying debt instruments. Short Term Rating are issued by CRA for debt instruments with an original maturity period of up to one year. While Long Term Rating are issued for debt instruments with an original maturity period of one year & above.
Scheme Category	A mutual fund scheme category is the classification of mutual fund schemes based on their underlying assets, risk profile, or investment objective, such as Equity, Debt, Hybrid, Thematic/Sectoral schemes, Solution oriented schemes and ETFs/Index Funds, etc.
Sharpe Ratio	The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.
SIP	SIP or Systematic Investment Plan is a method of investing a fixed amount in a mutual fund scheme at a regular / pre-defined intervals/ frequency (similar to recurring deposit in banks), and can be availed by the investor by giving a mandate (standing instructions) to the mutual fund to receive the money from the investor's bankers to whom the debit mandate is provided by the investor for investing the SIP instalment in the desired mutual fund scheme.
Standard Deviation	Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means it's range of performance is wide, implying greater volatility.
Tracking Difference	Tracking differences, i.e. the annualized difference of daily returns between the index or goods and the NAV of the ETF/ Index
Tracking Error	A divergence between the price behavior of a position or a portfolio and the price behavior of the benchmark.
Yield to Maturity	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
